Aggregative Games with Discontinuous Payoffs at the Origin

P. von Mouche

September 23, 2024

<u>Corrections:</u>

1. *79, first column, line 9 ↓:* $\underline{p} := \lim_{y \downarrow 0} \tilde{p}(y) \in \mathbb{R} \cup \{+\infty\}$.

2. *79, first column, line 15 ↓:* .. reductions $t_i : \Delta \to \mathbb{R} \cup \{+\infty\}$ given by

3. *79, second column, line 26 ↓:* ... type II and Assumption E holds. Then:

4. *80, first column, line 26 ↓:* .. A and (B) hold.

5. *80, second column, line 28 ↑:* 5. Suppose each player is type II and Assumption (E) holds. [Concerning this modification see, if wished, the correction of Theorem 5.191) in von Mouche and Szidarovszky (2023).]

6. *81, second column, line 25 ↑:* $0 \leq \alpha \leq 1$ ...
